DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hebiguchi in view of Ozawa et al., (U.S. Patent No. 6,462,724).

As per claims 1,4,5,7,8,9,10,12 Hebiguchi shows a scan line includes TFT disposed in an array, each array element having a TFT and a plurality of perpendicular scan line and data line (In col.4 lines 50-60) connecting to a gate and source of a TFT; a gate voltage deformation (resistor R40 In Fig.3) which connects between the gate of the first TFT and a input terminal of the scan line to deform the gate input voltage waveform connected to the scan line circuit (In Col.7 lines 40-45).

Hebiguchi does not show the drain of the TFT connecting to a liquid capacitor and a storage capacitor. Ozawa shows the drain of the TFT connecting to a liquid with ITO thin film and resistor with TFT source/gate connection (In Col.4 lines 40-49 and In fig.13) which capacitor and a storage capacitor (In Fig.13 and In col.28 lines 18-250. It would have been obvious to one of ordinary skill in the art, at the time of the invention was made to allow the teaching of storage and crystal capacitors of Ozawa's into the TFT-LCD device of Hebiguchi's because it would have applied the data in On/Off mode of a scanning mode and display mode.

As per claims 2,11 Hebiguchi shows the gate deformation device comprises a resistor (In fig.3 and In col.7 lines 38-40).

As per claim 3, the resistance of the resistor is in the range of 10 to 100 ohm 9In col.7 lines 51-59).
